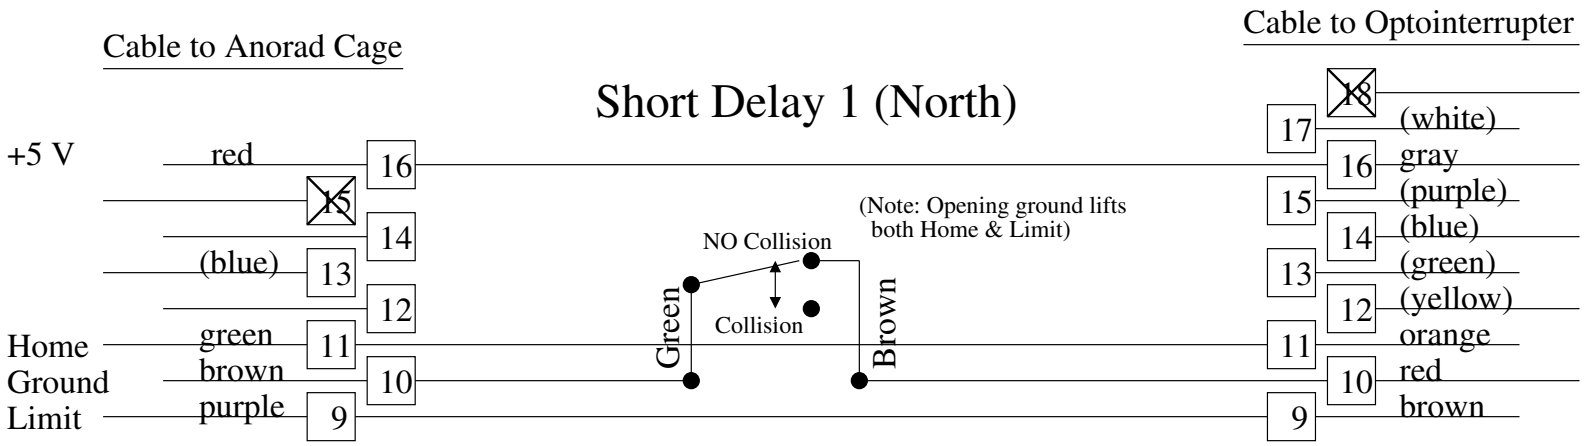
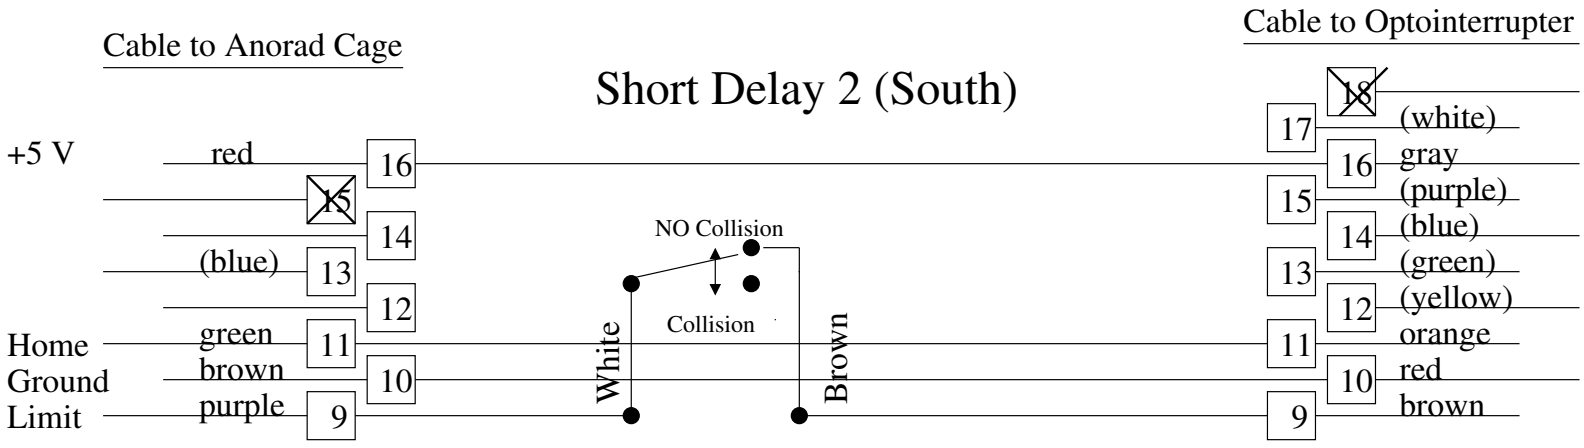
Short Delay Limit Boxes on SD1 & SD2

drawing by JDMonnier; design by MBrewer and MLacasse
2000December12



Note: These wires are all orange on SD1 but the color matching can be found using the SD2 cable which corresponds to above.



Note: Anorad only recognizes one Home and one Limit condition. The Home signal by itself indicates the HOME flag. The Limit signal by itself indicates LIMIT MINUS (−). Both Home and Limit indicates LIMIT PLUS (+). Hence, you can not have LIMIT PLUS w/o HOME flag. Home and Limit signals are HIGH, and pull−up resistors cause open circuits (see above circuits) to be high, that is to be interpreted as limit/home indicators.
